- One Course at a Time
 - 18 class days including finals
 - 4 hours per day
 - Students take, and faculty teach ... one course at a time
- 11 students
- all sophomores
- no pre-requisites
- Community Partners
 - Primary: [Waypoint](#)
 - Secondary: [Iowa Legal Aid](#)

Collaborative classroom

STA 200, Cornell College, bit.ly/STA200

Course Creation Timeline

- October 2022: Contacted Civic Engagement Office
- November 2022: Met with Waypoint to Discuss Ideas
- February 2023: Decided on Research Questions
- July 2023: Iowa Legal Aid Joined
- Early August 2023: Met to determine final asks and to discuss a community partner agreement
- Mid-August 2023: Set course details
- End August 2023: Received data, login information provided, and class started

Course Organization

- General outline
 - Engage with materials to understand disparity and inequity
 - Training by community patterns to use their websites and data
 - Descriptive statistics
 - Start group project
- Throughout
 - Relevant talks
 - Podcasts and videos
 - Reflection and course discussions

Pedagogy

- Engage -> Reflect -> Group discussion followed by whole class discussion
- Collaborative learning
 - The class was divided into 3 groups
 - Each group then divided tasks
 - TV on the wall to work on the same website
 - Each day those tasks rotated
 - Example: 1 - Controlling source website, 2 - typing record from the website, 3 - facilitating watching person typing to verify the record, 4 - working on report and/or presentation
- Presentations - students had to present progress on multiple occasions and the final project was presented to the community partner

Unprecedented Difficulties

- Waypoint was great but I didn't receive the data and sign-in information until the week before class started.
- Transportation
- Only 2 sets of login information
- Students had to sign a type of confidentiality agreement (not a formal)
- Picking software for data visualization
- Recording consistency

Give Back

- Students gave a final presentation to partners
- I found and fixed some student errors in data, then wrote metadata for all data files and turned it all back to Waypoint

The End - Thank you!
